CAREER PROFILE

A results-driven and detail-oriented software engineer with broad experience in software development, debugging, software testing, system configuration, code scalability, compliance, and database management. Experienced in developing high-quality solutions through rigorous testing, legacy code refactoring, and application performance improvements. Collaborates effectively within dynamic team environments, delivering precise, scalable, and reliable software solutions. Committed to continuous learning and leveraging technical expertise to solve complex engineering challenges.

TECHNICAL SKILLS

Languages: C++, Java, Python, Rust, PHP, C#, SQL, BASH
Tools & Technologies: Git, Spring Boot, Docker, React, RESTful APIs, Linux
Additional: Agile/Scrum, Object-Oriented Programming

EXPERIENCE

PAYCOM

Grapevine, Texas

2025–2026

- Developed tools to improve data analytics for internal sales teams by creating client lead trackers for internal Client Relationship Manager system to improve client acquisition.
- Produced maintenance improvements for Time-Off Management systems through bug fixes, legacy code updates, and feature-flag removals, supported by rigorous testing.
- Delivered additional enhancements and system optimizations to improve overall platform performance and usability.

BAYLOR UNIVERSITY

Waco, Texas

2022–2025

- Analyzed files from thousands of incoming freshman and transfer students.
- Accurately input transcript data into databases, maintaining above 90% precision department-wide.
- Actively participated in team-oriented office culture to foster a collaborative environment.
- Supported additional administrative and data integrity initiatives as needed.

FAST ENTERPRISE

Santa Fe, New Mexico

2024

- Improved application performance by refining SQL queries, resulting in faster data retrieval.
- Performed configuration checks to ensure system integrity and compliance with company standards.
- Upgraded systems by converting VB.NET functions to C#, enhancing code efficiency and future scalability.

PROJECTS

Meals to You

2025

- Created a web-based application that generates efficient delivery routes for a free-lunch program
- Incorporated features such as user authentication and route management for an intuitive user experience
- Utilized React, Flask, and SQL for frontend-backend integration to ensure reliable data management

EDUCATION

BAYLOR UNIVERSITY

Waco, Texas

2021–2025

- National Society of Black Engineers
- Alpha Phi Alpha Fraternity Inc.
